Propidium monoazide

| | |
|--------------------|--|
| Cat. No.: | HY-D1444 |
| CAS No.: | 91416-20-5 |
| Molecular Formula: | C ₂₇ H ₃₂ Cl ₂ N ₆ |
| Molecular Weight: | 511.49 |
| Target: | Fluorescent Dye |
| Pathway: | Others |
| Storage: | -20°C, sealed storage, away from moisture and light * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture and light) |

BIOLOGICAL ACTIVITY

Description

Propidium monoazide is a photoreactive DNA-binding dye that preferentially binds to dsDNA. Propidium monoazide (PMA) prevents DNA from dead bacteria from being amplified during the PCR. PMA-PCR enhanced both the specificity and the sensitivity of PCR^[1]. Propidium monoazide is a click chemistry reagent, it contains an Azide group and can undergo copper-catalyzed azide-alkyne cycloaddition reaction (CuAAC) with molecules containing Alkyne groups. Strain-promoted alkyne-azide cycloaddition (SPAAC) can also occur with molecules containing DBCO or BCN groups.
