PFB-FDG

Cat. No.:	HY-D1699
CAS No.:	209540-64-7
Molecular Formula:	C ₃₉ H ₃₂ F ₅ NO ₁₆
Molecular Weight:	865.66
Target:	Fluorescent Dye
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	PFB-FDG is a non-fluorescent galactosidase substrate that can be hydrolysed to green fluorescent PFB-F (Ex=485 nm, Em=535 nm). PFB-FDG can be used for the determination of β -galactosidase activity ^[1] .
In Vitro	<p>Guidelines (Following is our recommended protocol. This protocol only provides a guideline, and should be modified according to your specific needs).</p> <p>Measurement of β-galactosidase activity^[1]:</p> <ol style="list-style-type: none">1. Incubate 2×10^5 cells with 50 $\mu\text{g/mL}$ of PFB-FDG in serum-free DMEM containing 25 mM Hepes (pH 7.4) for 2 h at 37$^\circ\text{C}$. (Mononuclear cells for example, different cell concentrations vary)2. Wash cells once with ice-cold PBS.3. Analyze cells by flow cytometry (Ex=485 nm, Em=535 nm). <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
