Flipper-TR probe

Cat. No.:	HY-D2316
Molecular Formula:	C ₂₀ H ₁₄ O ₂ S ₆
Molecular Weight:	478.71
Target:	Fluorescent Dye
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Flipper-TR probe (Compound FliptR probe) is a fluorescent probe specifically designed to measure cell membrane tension. Flipper-TR probe reports changes in membrane tension through variations in its fluorescence lifetime. Flipper-TR probe is applicable to a wide range of organisms including bacteria, yeast, mammals, and plants ^[1] .
In Vitro	<p>Usage Guidelines:</p> <p>Storage: Flipper-TR should be stored at -20°C upon receipt.</p> <p>Probe Preparation: Dissolve the probe in anhydrous DMSO to create a 1 mM stock solution, which should be stored at -20 °C or lower.</p> <p>Staining Solution Preparation: Prior to use, dilute Flipper-TR to the desired concentration (typically starting at 1 μM) in cell culture medium.</p> <p>Staining Protocol: After cells reach the desired density, replace the culture medium with the staining solution to cover all cells, then incubate at 37°C in a humidified atmosphere with 5 % CO₂ for 15 minutes before imaging.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
