## Bovine Factor XIa

### BIOLOGICAL ACTIVITY

#### Description

Bovine Factor XIa is an enzyme, which is involved in the intrinsic pathway of blood coagulation. Bovine Factor XIa is highly selective and exhibits a minimal extended substrate recognition site of at least five residues long. Bovine Factor XIa is reactive as Bovine Factor IXa (HY-E70393I) does, that it cleaves all the peptides bearing factor IX activation site sequences<sup>[1]</sup>.
