Artesunate-d₄

| | |
|---------------------------|-------------------------------------------------------------------------------------------|
| Cat. No.: | HY-N0193S1 |
| CAS No.: | 1316753-15-7 |
| Molecular Formula: | C ₁₉ H ₂₄ D ₄ O ₈ |
| Molecular Weight: | 388.45 |
| Target: | STAT; Parasite; Ferroptosis; Virus Protease; Isotope-Labeled Compounds |
| Pathway: | JAK/STAT Signaling; Stem Cell/Wnt; Anti-infection; Apoptosis; Others |
| Storage: | Please store the product under the recommended conditions in the Certificate of Analysis. |

BIOLOGICAL ACTIVITY

| | |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | Artesunate-d ₄ is deuterium labeled Artesunate. Artesunate is an inhibitor of both STAT-3 and exported protein 1 (EXP1). |
| In Vitro | Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only. |
