BIOLOGICAL ACTIVITY

Description	α -Linolenic acid- $^{13}\text{C}_{18}$ is the ^{13}C labeled α -Linolenic acid. α -Linolenic acid, isolated from seed oils, is an essential fatty acid that cannot be synthesized by humans. α -Linolenic acid can affect the process of thrombotic through the modulation of PI3K/Akt signaling. α -Linolenic acid possess the anti-arrhythmic properties and is related to cardiovascular disease and cancer[1].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
