Trimyristin--d₁₅

Cat. No.:	HY-N2511S
CAS No.:	1219804-94-0
Molecular Formula:	C ₄₅ H ₇₁ D ₁₅ O ₆
Molecular Weight:	738.25
Target:	Cholinesterase (ChE); Phosphatase; Endogenous Metabolite; Isotope-Labeled Compounds
Pathway:	Neuronal Signaling; Metabolic Enzyme/Protease; Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Trimyristin--d ₁₅ is the deuterium labeled Trimyristin. Trimyristin, an active molluscicidal component of Myristica fragrans Houtt, significantly inhibits acetylcholinesterase (AChE), acid and alkaline phosphatase (ACP/ALP) activities in the nervous tissue of Lymnaea acuminata. IC50s of Trimyristin against AChE, ACP, and ALP are 0.11, 0.16 and 0.18 mM, respectively[1].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
