### BIOLOGICAL ACTIVITY

<b>Description</b>	Ochratoxin B- <sup>13</sup> C <sub>20</sub> is <sup>13</sup> C-labeled Ochratoxin B (HY-N6786). Ochratoxin B, a secondary metabolite of <i>Aspergillus ochraceus</i> , is the nonchlorinated analogue of the mycotoxin Ochratoxin A. Ochratoxin B has been shown to reduce the toxic effects of Ochratoxin A, and it is one of the most potent renal carcinogens in rodents <sup>[1][2][3]</sup> .
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
