### BIOLOGICAL ACTIVITY

Description	Motilin, human, porcine is a gastrointestinal hormone, which is released during fasting and after eating, or by drinking water. Motilin, human, porcine promotes enteric cholinergic activity in human stomach with an EC <sub>50</sub> of 33 nM, and thus modulates gastrointestinal motility function <sup>[1]</sup> .
In Vitro	Motilin, human, porcine binds the motilin receptor in human with an EC <sub>50</sub> of 11 nM <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
