Bevifimod

Cat. No.:	HY-P99477
CAS No.:	2223113-32-2
Target:	Others
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Bevifimod (PRTX-100) is a highly purified form of Staphylococcal protein A (SpA). Bevifimod can be used for idiopathic thrombocytopenic purpura (ITP) research ^{[1][2]} .
In Vitro	Bevifimod (PRTX-100; 250, 25, and 2.5 ng/mL; 48 hours) inhibits the phagocytosis of W632 opsonized platelets by human monocytes in peripheral blood mononuclear cells (PBMCs) ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
In Vivo	Bevifimod (PRTX-100) 2.5-250 µg/kg i.v. 4 times 1-2 weeks ^[2] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
Animal Model:	SCID mice bearing immune thrombocytopenia (ITP) ^[2]
Dosage:	2.5 µg/kg, 25 µg/kg, 250 µg/kg
Administration:	i.v.; once every two weeks; for 4 weeks
Result:	Raised platelet counts in a well-established murine model of ITP.
