## Sevirumab

Cat. No.:	HY-P99900
CAS No.:	138660-96-5
Target:	CMV
Pathway:	Anti-infection
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

Description	Sevirumab (MSL-109) is a human IgG1 neutralizing monoclonal antibody against cytomegalovirus (CMV). Sevirumab recognizes CMV gH complexes and inhibits CMV replication with an EC <sub>50</sub> of 0.3 µg/mL <sup>[1][2]</sup> .
IC <sub>50</sub> & Target	EC <sub>50</sub> : 0.3 µg/mL (CMV) <sup>[1]</sup>
In Vitro	Sevirumab (MSL-109) perturbs the gH/gL homodimer rather than abolishing dimerization. Sevirumab may be splaying the dimer apart at sufficient distance to reduce fluorescence resonance energy transfer (FRET) and ultimately prevent proper gH/gL function <sup>[2]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
