BIOLOGICAL ACTIVITY

Description	1-Thioglycerol, commonly used as a reducing agent in various biochemical and biophysical applications, especially in protein chemistry and molecular biology, it can protect proteins from oxidation and denaturation, and can reduce disulfide bonds to thiols base, which can then be modified or analyzed. In addition, 1-Thioglycerol has been investigated for potential medical applications, including as an inhibitor of cystic fibrosis, which may help improve the function of lung cells, and has also been studied for Used in the preparation of metal nanoparticles and as a stabilizer for certain pharmaceutical preparations.
In Vitro	1-Thioglycerol is a biochemical reagent that can be used as a biological material or organic compound for life science related research. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Caution: Product has not been fully validated for medical applications. For research use only.
