L-Homocystine-d₈

Cat. No.:	HY-W011690S		
CAS No.:	182755-41-5		
Molecular Formula:	C ₈ H ₈ D ₈ N ₂ O ₄ S ₂		
Molecular Weight:	276.4		
Target:	Endogenous Metabolite		
Pathway:	Metabolic Enzyme/Protease		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

BIOLOGICAL ACTIVITY

Description	L-Homocystine-d ₈ is the deuterium labeled L-Homocystine. L-Homocystine is the oxidized member of the L-homocysteine. Homocysteine is a pro-thrombotic factor, vasodilation impairing agent, pro-inflammatory factor and endoplasmic reticulum-stress inducer used to study cardiovascular disease mechanisms.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
