### BIOLOGICAL ACTIVITY

<b>Description</b>	2-Heptanol-d <sub>5</sub> is deuterated labeled Citronellol (HY-W010201). Citronellol ((±)-Citronellol) is a monoterpene Pelargonium graveolens. Citronellol ((±)-Citronellol) induces necroptosis of cancer cell via up-regulating TNF-α, RIP1/RIP3 activities, down-regulating caspase-3/caspase-8 activities and increasing ROS (reactive oxygen species) accumulation <sup>[1]</sup> .
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
