### BIOLOGICAL ACTIVITY

<b>Description</b>	Boc-NH-PEG6-CH <sub>2</sub> CH <sub>2</sub> COOH is a cleavable ADC linker used as a linker for antibody-drug conjugates (ADC). Boc-NH-PEG6-CH <sub>2</sub> CH <sub>2</sub> COOH is also a PEG-based PROTAC linker that can be used in the synthesis of PROTACs <sup>[1]</sup> .		
<b>IC<sub>50</sub> &amp; Target</b>	Cleavable	Alkyl/ether	PEGs
<b>In Vitro</b>	ADCs are comprised of an antibody to which is attached an ADC cytotoxin through an ADC linker. PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
