Ferrocenylmethyltrimethylammonium iodide

| | |
|---------------------------|--|
| Cat. No.: | HY-W075836 |
| CAS No.: | 12086-40-7 |
| Molecular Formula: | C ₁₄ H ₂₀ FeIN |
| Molecular Weight: | 385.08 |
| Target: | Biochemical Assay Reagents |
| Pathway: | Others |
| Storage: | 4°C, protect from light, stored under nitrogen * In solvent : -80°C, 6 months; -20°C, 1 month (protect from light, stored under nitrogen) |

BIOLOGICAL ACTIVITY

| | |
|--------------------|---|
| Description | Ferrocenylmethyltrimethylammonium (iodide) is an organometallic salt consisting of a ferrocenyl group attached to a quaternary ammonium cation via a methylene bridge. Ferrocenylmethyltrimethylammonium (iodide) has been used as a catalyst and reagent in various organic reactions, including oxidation, reduction, and CH bond activation. In addition, it is also used as a precursor for the synthesis of other organometallic compounds and as a potential material for electrochemical applications. |
| In Vitro | Ferrocenylmethyltrimethylammoniumiodide is a biochemical reagent that can be used as a biological material or organic compound for life science related research. MCE has not independently confirmed the accuracy of these methods. They are for reference only. |

Caution: Product has not been fully validated for medical applications. For research use only.
