Decyl β -D-glucopyranoside

Cat. No.:	HY-W127628
CAS No.:	58846-77-8
Molecular Formula:	C ₁₆ H ₃₂ O ₆
Molecular Weight:	320.42
Target:	Biochemical Assay Reagents
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Decyl β -D-glucopyranoside is a nonionic surfactant commonly used in biochemical and molecular biology research. It can be used for the extraction, purification and structural analysis of cell membranes, and is widely used in the fields of proteomics and genetic engineering. In addition, this compound is also used as an auxiliary reagent and dehydrating agent in some biochemical experiments.
In Vitro	Decyl β -D-glucopyranoside is a glucofuran that interacts with bovine serum albumin (BSA). Decyl β -D-glucopyranoside has the ability to quench intrinsic fluorescence by forming a complex with BSA ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
