BIOLOGICAL ACTIVITY

Description	Itaconic acid, a precursor of polymers, chemicals, and fuels, can be synthesized by many fungi. Itaconic acid also is a macrophage-specific metabolite. Itaconic acid mediates crosstalk between macrophage metabolism and peritoneal tumors. Itaconic acid has anti-inflammatory, anti-microbial and immunomodulatory effect ^{[1][2][4][5]} .
IC₅₀ & Target	Human Endogenous Metabolite
In Vitro	Itaconic acid (2–8 mM, 24 h) induces ferroptosis by activating ferritinophagy in PANC1 cells ^[3] . Itaconic acid (10 mM, 24 h) inhibits LPS-induced inflammatory cytokines in RAW264.7 cells ^[4] . Itaconic acid (10 mM, 24 h) promotes the pentose phosphate pathway (PPP) and NADPH oxidase activity in RAW264.7 cells ^[4] . Itaconic acid (10 mM, 24-72 h) inhibits cell viability of cerebellar granule cells (CGC) and inhibits ADP-stimulated respiration in permeabilized CGC cells ^[5] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
