Methoxyamine-d₃ Hydrochloride

Cat. No.:	HY-Y0958S
CAS No.:	110220-55-8
Molecular Formula:	CH ₃ D ₃ ClNO
Molecular Weight:	86.54
Target:	Isotope-Labeled Compounds; DNA/RNA Synthesis; Apoptosis
Pathway:	Others; Cell Cycle/DNA Damage; Apoptosis
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

HCl

BIOLOGICAL ACTIVITY

Description	Methoxyamine-d ₃ (O-Methylhydroxylamine-d ₃) hydrochloride is the deuterium labeled Methoxyamine hydrochloride. Methoxyamine hydrochloride is an orally active and potent base excision repair (BER) inhibitor ^[1] .
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
