Catalogue Number PBM1DC4SHE270-FSXX

Product Name Fresh human peripheral blood mononuclear cells (PBMC)

from whole human blood in sodium heparin - female

donor - chilled overnight delivery

Size From 270 ml whole blood

Product Description

Fresh human peripheral blood mononuclear cells (PBMC) isolated via Ficoll density gradient separation from fresh whole blood from a female donor collected in Vacutainers containing sodium heparin anticoagulant. Blood comes from a healthy donor aged between 18-66. Donors are screened and tested negative for HIV, Hepatitis B and C and Syphilis, and isolated PBMCs are batch tested negative for bacteria and Mycoplasma via PCR. The PBMCs are stored and shipped under chilled conditions and are shipped overnight to arrive the day after collection. PBMC number varies significantly from donor to donor. Therefore, our PBMC sizing is described in relation to the volume of fresh blood from which the PBMCs are isolated from. This product contains between 81 - 270 million PBMCs and is delivered in a 50 ml falcon tube containing Dulbecco's medium.

These products are for use in Biomedical Research only. They are not to be used for any form of human treatment, or for any purpose that is prohibited by law, including any use for human reproductive cloning.

Product Temperature Chilled (stored +4°C, shipped +2°C - +8°C)

Sex Female

Pooling Single donor

Blood Group Not specified

Sample Age Overnight

Important Information

This product is for Research Use Only and not for any diagnostic, therapeutic or human use.

The product originates from human tissue and may be contaminated with infectious agents. Whilst it has been tested with research grade tests, it should be handled with all appropriate biosafety precautions applicable to material of this type.

Donors give their consent for the use of their samples in biomedical research, (including commercial research) relating to the development and production of new medical treatments, medical services, medical tests, medical devices, biomedical research technologies, a wide range of research studies. Donor consent is given for DNA analysis and/or DNA extraction and/or any other form of genetic analysis and for animal research including xenografts.

It is your responsibility to ensure that you have necessary licensing and ethical approvals in place for the use and storage of any human tissue related material supplied by Research Donors Ltd.
