# 11 $\beta$ -HSD2 (h2): 293T Lysate: sc-116955

## BACKGROUND

Glucocorticoid hormone action in target tissues is modulated by 11 $\beta$ -hydroxysteroid dehydrogenase (11 $\beta$ -HSD), which catalyzes the interconversion of hormonally active C11-hydroxylated corticosteroids (cortisol, corticosterone) and their inactive C11-keto metabolites (cortisone, 11-dehydrocorticosterone). At least two isoforms of 11 $\beta$ -HSD exist: a low-affinity NADP-dependent dehydrogenase/oxoreductase (11 $\beta$ -HSD1) and a high-affinity NAD-dependent dehydrogenase (11 $\beta$ -HSD2). The glycosylated 11 $\beta$ -HSD1 protein activates cortisol from cortisone, which is widely expressed in mammals, and is most highly expressed in the liver. 11 $\beta$ -HSD2 inactivates cortisol to cortisone and is expressed in placenta, aldosterone target tissues (kidney, parotid, colon and skin) and pancreas. 11 $\beta$ -HSD1 may play a role in glucose homeostasis and pathogenesis of a number of disorders including Insulin resistance and obesity. 11 $\beta$ -HSD2 associates with differentiation or maturation in human colonic epithelia and may serve as a marker in development and disease. In addition, 11 $\beta$ -HSD2 plays a crucial role in modulating mineralocorticoid and glucocorticoid receptor occupancy by glucocorticoids.

## STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

## CHROMOSOMAL LOCATION

Genetic locus: HSD11B2 (human) mapping to 16q22.1.

## PRODUCT

11 $\beta$ -HSD2 (h2): 293T Lysate represents a lysate of human 11 $\beta$ -HSD2 transfected 293T cells and is provided as 100  $\mu$ g protein in 200  $\mu$ l SDS-PAGE buffer.

## APPLICATIONS

11 $\beta$ -HSD2 (h2): 293T Lysate is suitable as a Western Blotting positive control for human reactive 11 $\beta$ -HSD2 antibodies. Recommended use: 10-20  $\mu$ l per lane.

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

11 $\beta$ -HSD2 (C-9): sc-365529 is recommended as a positive control antibody for Western Blot analysis of enhanced human 11 $\beta$ -HSD2 expression in 11 $\beta$ -HSD2 transfected 293T cells (starting dilution 1:100, dilution range 1:100-1:1,000).

## RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:  
1) Western Blotting: use m-IgG $\kappa$  BP-HRP: sc-516102 or m-IgG $\kappa$  BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.

## DATA

11 $\beta$ -HSD2 (C-9): sc-365529. Western blot analysis of 11 $\beta$ -HSD2 expression in non-transfected: sc-117752 (A) and human 11 $\beta$ -HSD2 transfected: sc-116955 (B) 293T whole cell lysates.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## PROTOCOLS

See our web site at [www.scbt.com](http://www.scbt.com) for detailed protocols and support products.
