# Act1 (m): 293T Lysate: sc-118224

## BACKGROUND

Members of the NF $\kappa$ B family of transcription factors are important in regulating the expression of various cellular and viral genes involved in immune and inflammatory responses, cell survival and stress responses. IL-1, TNF $\alpha$  and other related signaling pathways activate transcription factors through the activation of JNK. The NF $\kappa$ B signaling pathway converges with the signal-induced activation of JNK upstream of IKK. Isolated from the human embryonic kidney (HEK) 293 cell line, Act1 is an IKK $\gamma$ -associated protein that activates both NF $\kappa$ B and JNK constitutively. Act1, also designated NF $\kappa$ B activator 1 or CIKS (for connection to IKK and SAPK/JNK), may function as a coordinator between two stress-induced signaling pathways.

## CHROMOSOMAL LOCATION

Genetic locus: Traf3ip2 (mouse) mapping to 10 B1.

## PRODUCT

Act1 (m): 293T Lysate represents a lysate of mouse Act1 transfected 293T cells and is provided as 100  $\mu$ g protein in 200  $\mu$ l SDS-PAGE buffer.

## STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## APPLICATIONS

Act1 (m): 293T Lysate is suitable as a Western Blotting positive control for mouse reactive Act1 antibodies. Recommended use: 10-20  $\mu$ l per lane.

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

## PROTOCOLS

See our web site at [www.scbt.com](http://www.scbt.com) for detailed protocols and support products.
