SANTA CRUZ BIOTECHNOLOGY, INC.

FCHO1 (m): 293T Lysate: sc-120228

BACKGROUND

FCHO1 (FCH domain only 1) is an 889 amino acid protein that contains one FCH domain and exists as multiple alternatively spliced isoforms. The gene encoding FCHO1 maps to human chromosome 19, which consists of over 63 million bases, houses approximately 1,400 genes and is recognized for having the greatest gene density of the human chromosomes. It is the genetic home for a number of immunoglobulin (Ig) superfamily members, including the killer cell and leukocyte Ig-like receptors, a number of ICAMs, the CEACAM and PSG family and Fc receptors (Fc Rs). Key genes for eye color and hair color also map to chromosome 19.

CHROMOSOMAL LOCATION

Genetic locus: Fcho1 (mouse) mapping to 8 B3.3.

PRODUCT

FCHO1 (m): 293T Lysate represents a lysate of mouse FCHO1 transfected 293T cells and is provided as 100 µg protein in 200 µl SDS-PAGE buffer.

APPLICATIONS

FCHO1 (m): 293T Lysate is suitable as a Western Blotting positive control for mouse reactive FCHO1 antibodies. Recommended use: 10-20 µl per lane.

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

PROTOCOLS

See our web site at www.scbt.com for detailed protocols and support products.
