# Rad1 (h2): 293T Lysate: sc-171349

## BACKGROUND

DNA damage or incomplete replication of DNA results in inhibition of cell cycle progression at the G<sub>1</sub>/S or G<sub>2</sub>/M checkpoints by conserved regulatory mechanisms. Rad17 is involved in regulation of cell cycle arrest at the G<sub>1</sub> checkpoint, whereas Chk1, Rad1, Rad9 and Hus1 are involved in regulation of cell cycle arrest at the G<sub>2</sub> checkpoint. Overexpression of Rad17 results in p53 activation and an accumulation of cells in G<sub>1</sub> phase. Chk1 functions as an essential component in the G<sub>2</sub> DNA damage checkpoint by phosphorylating Cdc25C in response to DNA damage, thus inhibiting mitosis. Hus1 and Rad9 exhibit conserved function in fission yeast and higher eukaryotes. Hus1 has been shown to be phosphorylated in response to DNA damage, a process which requires Rad checkpoint genes. Rad9 is thought to be a candidate tumor suppressor gene because it is localized to a region of human chromosome 11, which is a region containing a number of tumor suppressor loci.

## CHROMOSOMAL LOCATION

Genetic locus: RAD1 (human) mapping to 5p13.2.

## PRODUCT

Rad1 (h2): 293T Lysate represents a lysate of human Rad1 transfected 293T cells and is provided as 100 µg protein in 200 µl SDS-PAGE buffer.

## APPLICATIONS

Rad1 (h2): 293T Lysate is suitable as a Western Blotting positive control for human reactive Rad1 antibodies. Recommended use: 10-20 µl per lane.

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

## STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## PROTOCOLS

See our web site at [www.scbt.com](http://www.scbt.com) for detailed protocols and support products.
