PEBP2 β (h3): 293T Lysate: sc-172714

BACKGROUND

The transcription factor polyomavirus enhancer binding protein 2 (PEBP2), also designated Osf2 (osteoblast-specific transcription factor), CBF α 1 (core binding factor) and AML3 (acute myeloid leukemia), is composed of two subunits, α and β , which are essential for the regulation of hematopoiesis and osteogenesis. The PEBP2 α subunits, PEBP2 α A, PEBP2 α B and PEBP2 α C, are encoded by three RUNX genes, all of which contain a 128 amino acid region homologous to the highly conserved *Drosophila* segmentation gene, runt. This region is involved in DNA binding and heterodimerization with the regulatory β subunit, which facilitates DNA binding of the α subunit. Both subunits are required for *in vivo* function; the disruption of either gene results in a lack of definitive hematopoiesis followed by embryo death in utero due to hemorrhage in the central nervous system. The gene encoding PEBP2 β is the target of chromosomal inversion 16 (p13;q22) with the smooth muscle myosin heavy chain, producing a chimeric gene, PEBP2 β /CBF β -SMMHC, that is associated with human acute myeloid leukemia.

CHROMOSOMAL LOCATION

Genetic locus: CFBF (human) mapping to 16q22.1.

PRODUCT

PEBP2 β (h3): 293T Lysate represents a lysate of human PEBP2 β transfected 293T cells and is provided as 100 μ g protein in 200 μ l SDS-PAGE buffer.

STORAGE

Store at -20 $^{\circ}$ C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

PROTOCOLS

See our web site at www.scbt.com for detailed protocols and support products.

APPLICATIONS

PEBP2 β (h3): 293T Lysate is suitable as a Western Blotting positive control for human reactive PEBP2 β antibodies. Recommended use: 10-20 μ l per lane.

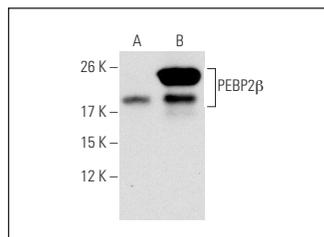

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

PEBP2 β (A-4): sc-166142 is recommended as a positive control antibody for Western Blot analysis of enhanced human PEBP2 β expression in PEBP2 β transfected 293T cells (starting dilution 1:100, dilution range 1:100-1:1,000).

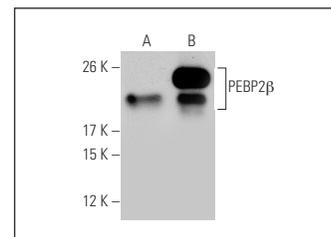

RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:
 1) Western Blotting: use m-IgG κ BP-HRP: sc-516102 or m-IgG κ BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.

DATA

PEBP2 β (A-4): sc-166142. Western blot analysis of PEBP2 β expression in non-transfected: sc-117752 (A) and human PEBP2 β transfected: sc-172714 (B) 293T whole cell lysates.

PEBP2 β (H-10): sc-166126. Western blot analysis of PEBP2 β expression in non-transfected: sc-117752 (A) and human PEBP2 β transfected: sc-172714 (B) 293T whole cell lysates.

RESEARCH USE

For research use only, not for use in diagnostic procedures.
