# 3 $\beta$ -HSD (h2): 293T Lysate: sc-173046

## BACKGROUND

3 $\beta$ -hydroxysteroid dehydrogenase (3 $\beta$ -HSD), also known as HSD3B1 or HSD3B3, is a bifunctional enzyme that plays a crucial role in the synthesis of all classes of hormonal steroids. Two human 3 $\beta$ -HSD proteins, designated type I (3 $\beta$ -HSD) and type II (3 $\beta$ -HSD2), are expressed by different genes and function in different areas of the body. Localized to the membrane of the endoplasmic reticulum (ER) and expressed in skin and placenta, 3 $\beta$ -HSD is the type I protein that catalyzes the oxidative conversion of  $\delta^5$ -ene-3- $\beta$ -hydroxy steroid, as well as the conversion of various ketosteroids. Defects in the gene encoding 3 $\beta$ -HSD are associated with classic salt wasting, genital ambiguity, hypogonadism, Insulin-resistant polycystic ovary syndrome (PCOS) and an increased susceptibility to prostate cancer. Additionally, congenital deficiency of 3 $\beta$ -HSD activity results in a severe depletion of steroid formation which can be lethal in young children.

## STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

## CHROMOSOMAL LOCATION

Genetic locus: HSD3B1 (human) mapping to 1p12.

## PRODUCT

3 $\beta$ -HSD (h2): 293T Lysate represents a lysate of human 3 $\beta$ -HSD transfected 293T cells and is provided as 100  $\mu$ g protein in 200  $\mu$ l SDS-PAGE buffer.

## APPLICATIONS

3 $\beta$ -HSD (h2): 293T Lysate is suitable as a Western Blotting positive control for human reactive 3 $\beta$ -HSD antibodies. Recommended use: 10-20  $\mu$ l per lane.

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

3 $\beta$ -HSD (37-2): sc-100466 is recommended as a positive control antibody for Western Blot analysis of enhanced human 3 $\beta$ -HSD expression in 3 $\beta$ -HSD transfected 293T cells (starting dilution 1:100, dilution range 1:100-1:1,000).

## RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:  
1) Western Blotting: use m-IgG $\kappa$  BP-HRP: sc-516102 or m-IgG $\kappa$  BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.

## DATA

3 $\beta$ -HSD (37-2): sc-100466. Western blot analysis of 3 $\beta$ -HSD expression in non-transfected: sc-117752 (A) and human 3 $\beta$ -HSD transfected: sc-173046 (B) 293T whole cell lysates.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## PROTOCOLS

See our web site at [www.scbt.com](http://www.scbt.com) for detailed protocols and support products.
