### SANTA CRUZ BIOTECHNOLOGY, INC.

# COLO 205 Whole Cell Lysate: sc-364177

BACKGROUND

Santa Cruz Biotechnology offers a variety of whole cell lysates for use in combination with our antibodies as Western Blotting controls. COLO 205 Whole Cell Lysate is derived from the COLO 205 cell line using a procedure that ensures protein integrity and lot-to-lot reproducibility. All lysates are tested by Western Blotting to assure that each one contains the expected concentration and assortment of proteins. Numerous antibodies directed against a wide array of mammalian proteins are used to test each lysate.

The COLO 205 line was isolated in 1975 by T.U. Semple, et al. from ascitic fluid of a 70 year old Caucasian male with carcinoma of the colon. The patient had been treated with 5-fluorouracil for 4-6 weeks before removal of the fluid specimen. The cells are CSAp negative (CSAp<sup>-</sup>). The line was derived from tissue from the same patient as COLO 201. The cells are positive for keratin by immunoperoxidase staining. COLO 205 cells express a 36 kDa cell surface glycoprotein related to the GA733-2 tumor-associated antigen.

#### SOURCE

COLO 205 Whole Cell Lysate is derived from the COLO 205 cell line.

Organism:	<i>Homo sapiens</i> (human)
Tissue:	Colon
Cell Type:	Epithelial
Disease:	Colorectal adenocarcinoma
Growth Properties:	Adherent and suspension

#### PRODUCT

Each vial contains 500  $\mu g$  protein in 200  $\mu l$  of an SDS-PAGE Western Blotting buffer, which consists of 100  $\mu l$  RIPA Lysis Buffer and 100  $\mu l$  Electrophoresis Buffer, 2X.

#### APPLICATIONS

COLO 205 Whole Cell Lysate is provided as a Western Blotting positive control. Recommended use is 50  $\mu$ g (20  $\mu$ l) per lane. Sample vial should be boiled once prior to use.

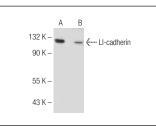

#### **STORAGE**

Store at -20° C; stable for one year from the date of shipment. Non-hazardous. No MSDS required. Minimize repeated freezing and thawing.

#### **PREPARATION METHOD**

Cells are cultured with appropriate media conditions and allowed to reach a confluency of 75%. Cells are lysed using the RIPA Lysis Buffer System (sc-24948). The BCA Protein Assay Kit (sc-202389) is used to determine the total protein concentration. The lysate is adjusted to contain 500  $\mu$ g of total cellular protein in 100  $\mu$ l before adding an equal volume of Electrophoresis Sample Buffer, 2X (sc-24945). Final concentration of product is 500  $\mu$ g total protein in a final volume of 200  $\mu$ l.

#### DATA

LI-cadherin (C-17): sc-6978. Western blot analysis of LI-cadherin expression in Jurkat (A) and COLO 205 (B) whole cell lysates.

#### **RESEARCH USE**

For research use only, not for use in diagnostic procedures.

#### PROTOCOLS

See our web site at www.scbt.com or our catalog for detailed protocols and support products.
