β-defensin 2 siRNA (m): sc-43722

The Power to Question

BACKGROUND

 β -defensins (also designated BD, and HBD in human) are small cationic peptides with broad-spectrum antimicrobial activity. β -defensins are involved in the resistance of epithelial surfaces, such as airway surface fluid, to microbial colonization. Human β -defensin 2 is locally regulated by inflammation and is the first member of the β -defensin family that is locally inducible by inflammation. The murine homolog of human β -defensin 2, which is called β -defensin 3, is present in the respiratory system and in low levels in the epithelial cells of the intestine and lung. The unique murine β -defensin 2 (Def β 2) is not expressed in airways of untreated mice, but is upregulated in the airways by lipopolysaccharide and may contribute to host defense at the mucosal surface of the airways.

CHROMOSOMAL LOCATION

Genetic locus: Defb2 (mouse) mapping to 8 A2.

PRODUCT

 β -defensin 2 siRNA (m) is a pool of 3 target-specific 19-25 nt siRNAs designed to knock down gene expression. Each vial contains 3.3 nmol of lyophilized siRNA, sufficient for a 10 μ M solution once resuspended using protocol below. Suitable for 50-100 transfections. Also see β -defensin 2 shRNA Plasmid (m): sc-43722-SH and β -defensin 2 shRNA (m) Lentiviral Particles: sc-43722-V as alternate gene silencing products.

For independent verification of β -defensin 2 (m) gene silencing results, we also provide the individual siRNA duplex components. Each is available as 3.3 nmol of lyophilized siRNA. These include: sc-43722A, sc-43722B and sc-43722C.

PROTOCOLS

See our web site at www.scbt.com for detailed protocols and support products.

STORAGE AND RESUSPENSION

Store lyophilized siRNA duplex at -20° C with desiccant. Stable for at least one year from the date of shipment. Once resuspended, store at -20° C, avoid contact with RNAses and repeated freeze thaw cycles.

Resuspend lyophilized siRNA duplex in 330 μ l of the RNAse-free water provided. Resuspension of the siRNA duplex in 330 μ l of RNAse-free water makes a 10 μ M solution in a 10 μ M Tris-HCl, pH 8.0, 20 mM NaCl, 1 mM EDTA buffered solution.

APPLICATIONS

 $\beta\text{-defensin}$ 2 siRNA (m) is recommended for the inhibition of $\beta\text{-defensin}$ 2 expression in mouse cells.

SUPPORT REAGENTS

For optimal siRNA transfection efficiency, Santa Cruz Biotechnology's siRNA Transfection Reagent: sc-29528 (0.3 ml), siRNA Transfection Medium: sc-36868 (20 ml) and siRNA Dilution Buffer: sc-29527 (1.5 ml) are recommended. Control siRNAs or Fluorescein Conjugated Control siRNAs are available as 10 µM in 66 µl. Each contain a scrambled sequence that will not lead to the specific degradation of any known cellular mRNA. Fluorescein Conjugated Control siRNAs include: sc-36869, sc-44239, sc-44240 and sc-44241. Control siRNAs include: sc-37007, sc-44230, sc-44231, sc-44232, sc-44233, sc-44234, sc-44235, sc-44236, sc-44237 and sc-44238.
