m-IgG₁ BP-CFL 680: sc-533665

BACKGROUND

Mouse IgG₁ binding protein (IgG₁ BP) conjugated to CruzFluor™ 680 (CFL 680) is a strongly recommended alternative to conventional goat/rabbit anti-mouse IgG secondary antibodies for NIR Western Blotting (WB), immunofluorescence (IF) and flow cytometry (FCM) signal enhancement. CruzFluor™ 680 (CFL 680) is a near-infrared fluorescent dye that is an excellent substitute for AlexaFluor® 680, offering comparable photostability and the ability to resist protein quenching. Suitable for use with Near-Infrared (NIR) imaging systems, such as LI-COR/Odyssey, Invitrogen/iBright and other comparable systems. Mouse IgG₁ binding protein is a highly specific reagent that provides strong signal with minimal background and virtually complete elimination of lot to lot variation associated with conventionally generated secondary antibodies. Mouse IgG₁ binding protein (m-IgG₁ BP) is suitable for binding to most, but not all, mouse IgG₁ immunoglobulins, comprising approximately 55% of SCBT's mouse monoclonal antibodies; not suitable for use with mouse monoclonal IgG_{2a}, IgG_{2b}, IgG₃, IgM, IgA and IgE antibodies. It may slightly cross react with mouse IgG_{2b} or goat IgG antibodies. Not cross reactive with human, rat or rabbit IgG antibodies.

SOURCE

m-IgG₁ BP-CFL 680 is a purified recombinant mouse IgG₁ binding protein conjugated to CruzFluor™ 680 (CFL 680).

PRODUCT

Each vial contains 100 µg mouse IgG₁ binding protein-CFL 680 in 0.5 ml of PBS containing 0.1% gelatin and 0.1% sodium azide.

APPLICATIONS

m-IgG₁ BP-CFL 680 is recommended for detection of mouse IgG₁ by NIR Western Blotting (starting dilution: 1:1000, dilution range: 1:1000-1:10000) and immunofluorescence (starting dilution 1:50, dilution range 1:50-1:200) and flow cytometry (0.5-1 µg per 1 x 10⁶ cells). Optimal dilution to be determined by titration.

For Western Blotting using tissue extracts and m-IgG₁ BP-CFL 680, we strongly recommend subtracting endogenous immunoglobulins from extracts with Protein G PLUS-Agarose Reagent: sc-2002, to prevent Western Blotting interference when detecting proteins of approximately 25 kDa in size.
