Additional info

Cytokeratin 14 is a member of the Type I family of cytokeratins and is generally expressed in the basal cell layer of squamous epithelium. The cytokeratin 14 protein forms a heterotetramer with homodimers of cytokeratin 5 to contribute to the structural integrity of the intracellular cytoskeletal network. Anticytokeratin 14 has immunohistochemical utility as an aid in distinguishing squamous cell carcinomas from other tumors of epithelial origin.
