**Additional info**

Anti-renal cell carcinoma (RCC) recognizes a 200 kD glycoprotein localized in the brush border of the proximal renal tubule. This antibody immunoreacts with approximately most primary renal cell carcinomas and can aid in the diagnosis when renal cell carcinoma enters the differential diagnosis. Other tumors that may react with this antibody are parathyroid adenoma, an occasional breast carcinoma. Nephroblastoma, oncocytoma, mesoblastic nephroma, transitional cell carcinoma, and angiomyolipoma are not labeled with this antibody.
