MONOSAN

**Additional info**

Moon-4 is specific for CD29, an adhesion receptor and costimulatory molecule. This antigen was initially characterized as gpIIa on platelets and as the common  $\beta$ 1 subunit of the very late antigen (VLA) protein family. CD29 forms a non-covalent heterodimeric complex with integrin  $\alpha$  subunits. It is also mediates adhesion to invasin and thrombospondin.
