Clone no. P193-6

MONOSAN

Additional info

p193-6 reacts with an internal epitope (amino acids 593-599, FSKVEDY) of the minor vault protein (p193 or VPARP), which is overexpressed in various human non-P-glycoprotein MDR tumor cell lines, accordingly to an increase in the number of vault particles. p193-6 was raised against an E. coli lysate transformed with the pET28a(+) expression vector containing amino acids 408-611 of the p193 cDNA
