Additional info

M6II-21 reacts with MRP6, a 190-200 kD transmembrane protein that is related to the multidrug resistance related protein MRP. Mutations in the MRP6 gene are responsible for the connective tissue disorder Pseudoxanthoma elasticum (PXE). M6II-21 was raised against a bacterial fusion protein of human MRP6, containing amino acids 764-964, spanning the putative 12th transmembrane region as well as predicted internal and external regions of the protein. M6II-21 did not cross-react with the human MDR1, MRP1, MRP2, MRP3, MRP4, MRP5 gene products. Unreactive on standard IHC-P.
