Additional info

124-1D1 recognizes 40 kDa CD7, a member of the immunoglobulin gene superfamily and expressed on the majority of immature and mature T-lymphocytes, and T-cell leukemia. It is also found on natural killer cells, a small subpopulation of normal B-cells and on malignant B-cells. CD7 associates directly with phosphoinositol and tyrosine phosphorylation. 124-1D1 was assigned at the IVth International Workshop.
