## Kappa; Clone L1C1 (Ready-To-Use)

Availability/Contents:	Item # A00113-0002 A00113-0007 A00113-0025	<u>Volume</u> 2 ml 7 ml 25 ml
Description:		
Species: Immunogen: Clone: Isotype: Format: Specificity: Background:	embedded as well as ace The kappa light chain ant The kappa light chain itse other being lambda. Antil lymphocyte expresses eit kappa light chain antibody light chain. If a lymph node or other t mixture of lambda and ka as all kappa light chain po population. This may be such, the kappa light chain plasmacytomas and certa identification by the kappa expression of the kappa, Hence, the kappa light chain expressing kappa	retitered and quality controlled to work on formalin-fixed paraffin- tone fixed cryostat tissue sections. No further titration is required. ibody recognizes the kappa light chain of immunoglobulin. elf is one of the two small polypeptide subunits of an antibody, the bodies are produced by the B-cells in lymphoid tissue. Each B ther lambda or kappa light chain but never both together. Hence, the y is a useful marker for identifying B lymphocytes expressing kappa issue of lymphoid origin is normal or benign, it should contain a ppa light chain positive cells. However, if there is only one type, such ositive, then they may have all been derived from a clonal indicative of a pathological condition, including a malignancy. As in antibody has been reported to help identify leukemias, ain non-Hodgkin's lymphomas. The underlying mechanism of a light chain antibody in these various cancers would be their but not lambda, light chain. nain antibody has an overall usefulness in identifying normal B-cells iain as well as helping to identify malignancies or potentially other d by a clonally derived kappa light chain positive population.
Species Reactivity: Positive Control: Cellular Localization: Titer/Working Dilution:	Human. Tonsil. Cytoplasmic. No further dilution is requ	ired.

This product is not sterile.

Microbiological State:

ScyTek Laboratories, Inc. 205 South 600 West Logan, UT 84321 U.S.A.

### Instructions For Use A00113-IFU-RUO

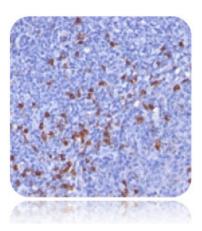

Rev. Date: Dec. 14, 2012

Revision: 1 Page 2 of 2

P.O. Box 3286 - Logan, Utah 84323, U.S.A. - Tel. (800) 729-8350 - Tel. (435) 755-9848 - Fax (435) 755-0015 - www.scytek.com

**Uses/Limitations:** 

Not to be taken internally. For Research Use Only. This product is intended for qualitative immunohistochemistry with normal and neoplastic formalin-fixed, paraffin-embedded tissue sections, to be viewed by light microscopy. Do not use if reagent becomes cloudy. Do not use past expiration date. Use caution when handling reagents. Non-Sterile.

### Procedure:

- 1. **Tissue Section Pretreatment:** Staining of formalin fixed, paraffin embedded tissue sections is enhanced by pretreatment with Citrate Plus (ScyTek catalog# CPL500) or Citrate Buffer (10x), pH 6.0 (ScyTek Catalog# CBB500, see IFU for instructions).
- Primary Antibody Incubation Time: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user.
- 3. **Visualization:** For maximum staining intensity we recommend the "UltraTek HRP Anti-Polyvalent Lab Pack" (ScyTek catalog# UHP125, see IFU for instructions) combined with the "DAB Chromogen/Substrate Bulk Pack (High Contrast)" (ScyTek catalog# ACV500, see IFU for instructions).

Precautions: Contains Sodium Azide as a preservative (0.09% w/v). Do not pipette by mouth. Avoid contact of reagents and specimens with skin and mucous membranes. Avoid microbial contamination of reagents or increased nonspecific staining may occur. This product contains no hazardous material at a <u>reportable concentration</u> according to U.S. 29 CFR 1910.1200, OSHA Hazardous Communication Standard and EC Directive 91/155/EC.

Warranty: No products or "Instructions For Use (IFU)" are to be construed as a recommendation for use in violation of any patents. We make no representations, warranties or assurances as to the accuracy or completeness of information provided on our IFU or website. Our warranty is limited to the actual price paid for the product. ScyTek Laboratories, Inc. is not liable for any property damage, personal injury, time or effort or economic loss caused by our products. Immunohistochemistry is a complex technique involving both histological and immunological detection methods. Tissue processing and handling prior to immunostaining can cause inconsistent results. Variations in fixation and embedding or the inherent nature of the tissue specimen may cause variations in results. Endogenous peroxidase activity or pseudoperoxidase activity in erythrocytes and endogenous biotin may cause non-specific staining depending on detection system used.
