# Melanoma Associated Antigen; Clone KBA.62 (Concentrate)

Availability/Contents: <u>Item #</u>
A00153-C.1 <u>Volume</u>
0.1 ml

A00153-C.1 0.1 m A00153-C 1 ml

**Description:** 

Species: Mouse

Immunogen: Human KAL cells derived from lymph node metastasis of malignant melanoma

Clone: KBA.62
Isotype: IgG1, kappa
Entrez Gene ID: Not Known
Hu Chromosome Loc.: Not Known

Synonyms: Human Melanoma Associated Antigen; KBA.62

Mol. Weight of Antigen: Multiple (140, 135 and 128kDa and two weak bands of 88 and 73kDa)

Format: 200µg/ml of Ab purified from Bioreactor Concentrate by Protein A/G. Prepared in 10mM PBS

with 0.05% BSA & 0.05% azide.

Specificity: KBA.62 is a novel anti-melanoma antibody. It reacts positively against melanocytic tumors but

not against other tumors, thus demonstrating specificity and sensitivity. Moreover, it reacts positively against junctional nevus cells but not intradermal nevi, and against fetal melanocytes

but not normal adult melanocytes.

Background: The KBA.62 antibody is useful in identifying malignant melanomas. Metastatic amelanotic

melanoma can often be confused with a variety of poorly differentiated carcinomas, large cell lymphomas, sarcomas, spindle cell carcinomas, and various types of mesenchymal neoplasms. A keratin-negative, vimentin-rich neoplasm that immuno-reacts with an antibody to S-100 protein and with KBA.62 antibody is, with rare exception, a melanoma. Anti-KBA.62 is a useful additional marker for melanoma, specifically in desmoplastic/spindle cell cases, and in the

context of micro-metastasis in the sentinel lymph node.

Species Reactivity: Human. Others not known.

Positive Control: Melanoma
Cellular Localization: Cell Surface

Titer/ Working Dilution: Immunohistochemistry (Frozen and Formalin-fixed): 0.5-1 µg/ml

Immunofluorescence: 0.5-1  $\mu$ g/ml Western Blotting: 0.5-1  $\mu$ g/ml

Microbiological State: This product is not sterile.

Storage: 2° C 8° C

# Instructions For Use

## A00153-C-IFU-RUO

Rev. Date: Feb. 25, 2015 **Revision: 1** 

P.O. Box 3286 - Logan, Utah 84323, U.S.A. - Tel. (800) 729-8350 - Tel. (435) 755-9848 - Fax (435) 755-0015 - www.scytek.com

**Uses/Limitations:** Not to be taken internally.

For Research Use Only.

This product is intended for qualitative immunohistochemistry with normal and neoplastic formalin-fixed, paraffin-embedded

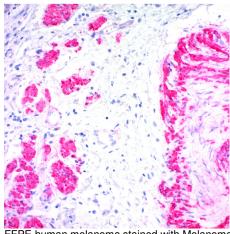

tissue sections, to be viewed by light

microscopy.

Do not use if reagent becomes cloudy. Do not use past expiration date.

Non-Sterile.

FFPE human melanoma stained with Melanoma Associated Antigen; Clone KBA.62 using UltraTek Alk-Phos and Permanent Red Chromogen. 200X

#### Procedure:

- Tissue Section Pretreatment (Required): Staining of formalin fixed, paraffin embedded tissue sections is enhanced by pretreatment with Citrate Plus (ScyTek catalog# CPL500).
- 2. Primary Antibody Incubation Time: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user.
- Visualization: For maximum staining intensity and to provide contrast with melanin pigment, we recommend the 3. UltraTek Alk-Phos Anti-Polyvalent Lab Pack with Permanent Red Kit (For Alkaline Phosphatase). (ScyTek catalog# UAP125 & PRD-60 see IFU for instructions).

**Precautions:** Contains Sodium Azide as a preservative (0.09% w/v).

Do not pipette by mouth.

Avoid contact of reagents and specimens with skin and mucous membranes.

Avoid microbial contamination of reagents or increased nonspecific staining may occur.

This product contains no hazardous material at a reportable concentration according to U.S. 29 CFR 1910.1200,

OSHA Hazardous Communication Standard and EC Directive 91/155/EC.

Warranty: No products or "Instructions For Use (IFU)" are to be construed as a recommendation for use in violation of any patents. We make no representations, warranties or assurances as to the accuracy or completeness of information provided on our IFU or website. Our warranty is limited to the actual price paid for the product. ScyTek Laboratories, Inc. is not liable for any property damage, personal injury, time or effort or economic loss caused by our products. Immunohistochemistry is a complex technique involving both histological and immunological detection methods. Tissue processing and handling prior to immunostaining can cause inconsistent results. Variations in fixation and embedding or the inherent nature of the tissue specimen may cause variations in results. Endogenous peroxidase activity or pseudoperoxidase activity in erythrocytes and endogenous biotin may cause non-specific staining depending on detection system used.
