# Mn SOD Protein

Rat Recombinant Mn SOD Protein  
Catalog No. SPR-130

Discovery through partnership | Excellence through quality

## Overview

---

### Product Name

Mn SOD Protein

### Description

Rat Recombinant Mn SOD Protein

### Applications

WB, SDS-PAGE

### Concentration

1.72 mg/ml

### Conjugates

His tag

### Nature

Recombinant

### Species

Rat

### Expression System

E. coli

## Properties

---

### Storage Buffer

50mM Tris/HCl pH7.7, 0.3M NaCl

### Storage Temperature

-20°C

### Shipping Temperature

Blue Ice or 4°C

### Purification

Affinity Purified

### Specificity

~25 kDa

### Cite This Product

Rat Recombinant Mn SOD Protein (StressMarq Biosciences Inc., Victoria BC CANADA, Catalog # SPR-130)

---

## Certificate Of Analysis

---

This product has been certified >90% pure using SDS-PAGE analysis.

---

## Other Relevant Information

---

No leader sequence

---

## Biological Description

---

### Alternative Names

Manganese SOD Protein, IPO B Protein, Mn SOD Protein, SOD2 Protein, Superoxide Dismutase (Mn) mitochondrial protein

---

### Research Areas

Cancer, Cell Signaling, Chaperones, Oxidative Stress, Trafficking

---

### Cellular Localization

Mitochondrion Matrix

---

### Accession Number

BC070913

---

### Gene ID

24787

---

### Swiss Prot

P07895

---

### Scientific Background

Superoxide dismutase (SOD) is an endogenously produced intracellular enzyme present in almost every cell in the body (3). It works by catalyzing the dismutation of the superoxide radical  $O_2^-$  to  $O_2$  and  $H_2O_2$ , which are then metabolized to  $H_2O$  and  $O_2$  by catalase and glutathione peroxidase (2, 5). In general, SODs play a major role in antioxidant defense mechanisms (4). There are two main types of SOD in mammalian cells. One form (SOD1) contains Cu and Zn ions as a homodimer and exists in the cytoplasm. The two subunits of 16 kDa each are linked by two cysteines forming an intra-subunit disulphide bridge (3). The second form (SOD2) is a manganese containing enzyme and resides in the mitochondrial matrix. It is a homotetramer of 80 kDa. The third form (SOD3 or EC-SOD) is like SOD1 in that it contains Cu and Zn ions, however it is distinct in that it is a homotetramer, with a mass of 30 kDa and it exists only in the extracellular space(8). SOD3 can also be distinguished by its heparin-binding capacity (1).
