Hexadimethrine bromide

Chemical Properties

CAS No. :	28728-55-4
Formula:	(C ₁₃ H ₃₀ N ₂) _n .Br ₂
Molecular Weight:	
Appearance:	no data available
Storage:	keep away from moisture Powder: -20°C for 3 years In solvent: -80°C for 1 year

Biological Description

Description	Hexadimethrine bromide (1,5-Dimethyl-1,5-diazaundecamethylene polymethobromide) is a synthetic polymer which agglutinates red blood cells, and used as a heparin antagonist.
Targets(IC50)	Others
In vitro	Hexadimethrine bromide impedes the proliferation of human mesenchymal stem cells during lentiviral transduction and is deemed non-toxic at low concentrations. Yet, at levels exceeding 10 µg/mL, it adversely impacts the proliferation of certain cell types. Moreover, cells treated with Hexadimethrine bromide and then trypsinized appear significantly enlarged under microscopic examination.

Solubility Information

Solubility	DMSO: 4.5 mg/mL, Sonication and heating are recommended. H ₂ O: 125 mg/mL (309.20 mM), (< 1 mg/ml refers to the product slightly soluble or insoluble)
------------	--
