Griffonia Simplicifolia Lectin I (GSL I) Isolectin B4, DyLight™ 594

DL-1207-.5

[Product Images](#)

Short Description

GSL I-B₄ isolectin contains only the B subunits. It is a useful marker for endothelial cells from nonprimates such as mouse, rat, rabbit, and goat as well as a marker for non-peptidergic unmyelinated primary afferent neurons. This "B"-rich lectin preferentially agglutinates blood group B cells and is specific for α-galactose residues.

DyLight™ 594 GSL I-B₄ isolectin is produced by using special conjugation procedures to incorporate DyLight™ 594 into our affinity-purified lectin. This conjugate has an appropriate number of fluorochromes bound which provide the maximum fluorescence and optimum staining characteristics for this particular lectin. This reagent is supplied essentially free of unconjugated fluorochromes and inactive lectin.
