ZYMO RESEARCH

***E. coli* Non-Methylated Genomic DNA**

Standards for DNA methylation analysis workflows

Highlights

- Negative control for epigenetic experiments requiring DNA containing zero background levels of cytosine and adenosine methylation.
- *In situ* spike-in control for monitoring bisulfite conversion efficiency in Next-Generation Sequencing experiments.
- Substrate for DNA methylation-sensitive restriction enzyme digestions.

Product Description

The ***E. coli* Non-methylated Genomic DNA** contains DNA purified from a K-12 *E. coli* strain which is Dam⁻ and Dcm⁻. It works perfectly as a negative control for DNA methylation analyses requiring DNA with absolutely no methylation. This standard can also be spiked into or run in parallel with experimental samples during next generation sequencing library prep to monitor bisulfite conversion efficiency and/or workflow performance. If used as an *in-situ* spike-in control, the reference genome of *E. coli* strain K-12 sub-strain MG1655 can be used for alignment and analysis. It can be accessed at the following web address:

https://www.ncbi.nlm.nih.gov/genome/167?genome_assembly_id=161521

Recommended Usage

The ***E. coli* Non-methylated Genomic DNA** can be used as a control for bisulfite conversion and downstream analyses such as bisulfite PCR, methylation sequencing applications, *in situ* spike in-controls, methylation assay calibration, and more.

Protocol

The ***E. coli* Non-methylated Genomic DNA** is highly intact genomic DNA. For best results, it's important to ensure the DNA is completely homogenous and fully in solution before quantification and usage. The following steps are recommended before quantification and usage¹:

1. Bring the standard to room temperature.
2. Vortex the standard for 10-15 seconds, briefly spin down for 5-10 seconds.
3. Repeat Step 2 twice, for three times total.
4. Proceed with quantification or usage.

Bisulfite Conversion: For most applications, 0.5-2.0 ng of *E. coli* genomic DNA for every 100 ng of experimental DNA sample may be used as an internal spike-in control for bisulfite conversion reactions. Refer to the kit specifications for setup of the bisulfite conversion reaction.

¹Standards are quantified using NanoDrop® measurements. If using other methods, variation may be observed.

Ordering Information

Product Description	Catalog No.	Size
Human Methylated & Non-methylated DNA Set	D5014	5 µg/20 µl
Human HCT116 DKO Non-Methylated DNA	D5014-1	5 µg/20 µl
Human HCT116 DKO Methylated DNA	D5014-2	5 µg/20 µl

100% satisfaction guarantee on all Zymo Research products, or your money back.

Zymo Research is committed to simplifying your research with quality products and services. If you are dissatisfied with this product for any reason, please call 1(888) 882-9682.

Integrity of kit components is guaranteed for up to one year from date of purchase. Reagents are routinely tested on a lot-to-lot basis to ensure they provide the highest performance and reliability.

This product is for research use only and should only be used by trained professionals. It is not for use in diagnostic procedures. Some reagents included with this kit are irritants. Wear protective gloves and eye protection. Follow the safety guidelines and rules enacted by your research institution or facility.
