# **INSTRUCTION MANUAL**

# Quick-DNA<sup>™</sup> Plant/Seed 96 Kit Catalog No. D6021

# Highlights

- Simple, high-throughput (96-well) isolation of DNA from all types of tough-to-lyse plant specimens (stems, roots, leaves, fruits, etc.) and seeds in as little as 50 minutes.
- State-of-the-art, ultra-high density **BashingBeads™** are fracture resistant and chemically inert.
- Omits the use of organic denaturants as well as proteinases.

| Silicon-A™ Plate                                  | 2                             | Room Temp.             |
| Silicon-A™-HRC Plate                              | 2                             | Room Temp.             |
| Collection Plate                                  | 2                             | Room Temp.             |
| Elution Plate                                     | 6                             | Room Temp.             |
| Cover Foil  | 4                             | Room Temp.             |
| Instruction Manual                                | 1                             | -                      |

Note - Integrity of kit components is guaranteed for up to one year from date of purchase. Reagents are routinely tested on a lot-to-lot basis to ensure they provide maximal performance and reliability.

<sup>1</sup> For optimal performance, add beta-mercaptoethanol to 0.5%(v/v) i.e., 750 µl per 150 ml.

 $^2$  A precipitate may have formed in the DNA Pre-Wash Buffer during shipping. To completely resuspend the buffer, incubate the bottle at 30 – 37 °C for 30 minutes and mix by inversion. DO NOT MICROWAVE.

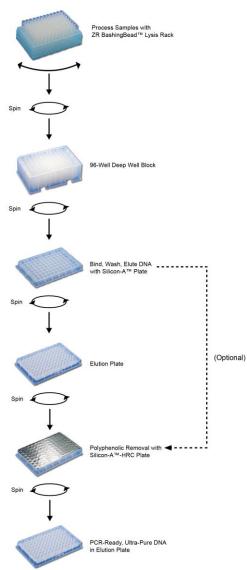

#### **Specifications**

- Format Bead Beating, 96-Well Plate Purification
- **Sample Sources** Up to 80 mg of plant sample sources which include leaves, stems, buds, flowers, fruit, seeds, etc.
- DNA Yield Typically 20-80 ng DNA/mg plant material.
- **DNA Purity** High quality, inhibitor-free DNA is eluted with **DNA Elution Buffer** that is suitable for PCR amplification. (*A*<sub>260</sub>/*A*<sub>280</sub> >1.8).
- **DNA Size Limits** Capable of recovering genomic DNA sized up to and above 40 kb. In most instances, mitochondrial DNA and viral DNA (if present) will also be recovered.
- DNA Recovery Typically, up to 5 μg total DNA is eluted into 100 μl (50 μl minimum) DNA Elution Buffer per sample.
- Equipment Centrifuge w/ microplate carriers, 96-well plate/block disruptor or pulverizer

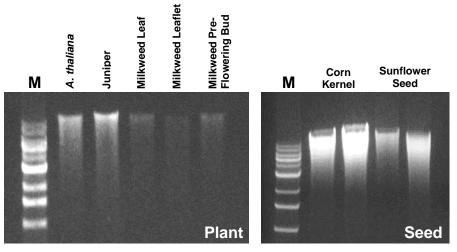

Note - <sup>TM</sup> Trademarks of Zymo Research Corporation. This product is for research use only and should only be used by trained professionals. It is not intended for use in diagnostic procedures. Some reagents included with this kit are irritants. Wear protective gloves and eye protection. Follow the safety guidelines and rules enacted by your research institution or facility.

#### **Product Description**

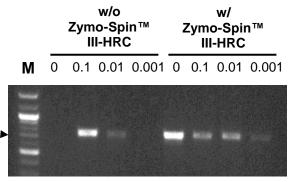

The **Quick-DNA<sup>™</sup> Plant/Seed 96 Kit** is designed for the simple, rapid, and high-throughput (96-well) isolation of inhibitor-free, PCR-quality DNA from a variety of plant sample sources including leaves, stems, buds, flowers, fruit, seeds, etc. The procedure is easy and can be completed in as little as 50 minutes: plant samples (≤ 80 mg each) are added directly to the tubes of a **ZR BashingBead<sup>™</sup> Lysis Rack** (2.0 mm) and are rapidly and efficiently lysed by bead beating (e.g., 2010 GenoGrinder<sup>®</sup> Instrument, page 5) without the use of organic denaturants or proteinases. Polysaccharides and polyphenols/tannins are removed from the DNA using our Zymo-Spin<sup>™</sup> 96-well plate and Silicon-A<sup>™</sup>-HRC Plate technologies, respectively. The eluted DNA is ideal for downstream molecular-based applications including PCR, arrays, etc. A schematic of the *Quick*-DNA<sup>™</sup> Plant/Seed 96 Kit procedure is shown below.

For **Technical Assistance**, please contact those at **Zymo Research's Technical Department** at 1-888-882-9682 or E-mail to tech@zymoresearch.com.

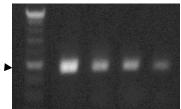

Comparison of DNA yields from various plant and seed samples using the **Quick-DNA™ Plant/Seed Kit.** Equivalent amounts of plant materials were processed with equal volumes of eluted DNA analyzed in a 0.8% (w/v) agarose/ethidium bromide gel. **M** is a 1 kb DNA size marker (Zvmo Research).

PCR of diluted DNA (0 to 0.001) isolated with the **Quick-DNA™ Plant/Seed Kit** from *Arabidopsis thaliana* leaf samples demonstrates the effectiveness of the **Zymo-Spin™ III-HRC Column** at removing PCR inhibitors from the DNA. The arrow shows the relative migration of a ~700 bp amplicon from Chromosome 1 in a 0.8% (w/v) agarose/ethidium bromide gel. **M** is a 100 bp DNA size marker (Zymo Research Corp.)

**M** 0 0.1 0.01 0.001

PCR of diluted DNA (0 to 0.001) isolated with **Quick-DNA<sup>TM</sup> Plant/Seed Kit** from corn kernels. The arrow shows the relative migration of a ~450 bp amplicon from mitochondrial DNA in a 0.8% (w/v) agarose/ethidium bromide gel. **M** is a 100 bp DNA size marker (Zymo Research Corp.)

#### **Protocol**

For optimal performance, add beta-mercaptoethanol (user supplied) to the **Genomic Lysis Buffer** to a final dilution of 0.5%(v/v) i.e., 750 µl per 150 ml.

<u>Before Starting</u>: The wells of a **Silicon A<sup>m</sup>-HRC Plate<sup>1</sup>** need to be prepared prior to use by: 1) Mounting the plate onto an **Elution Plate**, 2) Adding 150 µl **Prep Solution** to the wells by piercing the middle of the cover foil, and 3) Waiting for 5 minutes before centrifuging the plate at exactly 3,500 x g for 5 minutes.

- Add up to 80 mg of finely cut plant or seed sample to the tubes of a ZR BashingBead<sup>™</sup> Lysis Rack (2.0 mm). Add 400 µl BashingBead<sup>™</sup> Buffer to each tube. Cap tubes tightly to prevent leakage.
- Secure in a 96-well block/plate bead beater (e.g., 2010 GenoGrinder<sup>®</sup>) and process samples. Optimization of processing time/speed will be necessary for <u>complete</u> sample lysis.

**Note:** Processing times may be as little as one minute when using high-speed bead beaters (e.g., 2000 GenoGrinder<sup>®</sup>, page 5). See manufacturer's literature for specific operating information.

- 3. Centrifuge the **ZR BashingBead™ Lysis Rack (2.0 mm)** at ≥ 3,000 x g (5,000 x g max.) for 5 minutes.
- 4. Transfer up to 250 µl supernatant to each well of a **96-Well Block**.
- Add 750 µl of Genomic Lysis Buffer to the supernatant in the 96-Well Block from Step 4. Cover completely with Cover Foil and mix thoroughly by vortexing for 2 minutes. Centrifuge the 96-Well Block at ≥ 3,000 x g (5,000 x g max.) for 5 minutes.
- Remove or pierce foil and transfer 500 µl of each of the supernatants from Step 5 to the wells of a Silicon-A<sup>™</sup> Plate on a Collection Plate. Centrifuge the assembly at ≥ 3,000 x g (5,000 x g max.) for 5 minutes.
- 7. Discard the flow through from the **Collection Plate** and repeat Step 6.
- 8. Add 200 µl **DNA Pre-Wash Buffer** to the wells of the **Silicon-A<sup>TM</sup> Plate** on the <u>emptied</u> **Collection Plate** and centrifuge the assembly at  $\ge 3,000 \times g$  for 5 minutes.
- 9. Add 500 µl **g-DNA Wash Buffer** to the wells of the **Silicon-A<sup>™</sup> Plate** on the **Collection Plate** and centrifuge the assembly at ≥ 3,000 x g for 5 minutes.
- 10. Transfer the Silicon-A<sup>TM</sup> Plate onto a clean Elution Plate and add 100  $\mu$ l (50  $\mu$ l minimum) **DNA Elution Buffer** directly to the matrices in the plate. Centrifuge the assembly at  $\geq$  3,000 x g for 5 minutes.
- 11. Transfer the eluted DNA from Step 10 to a prepared **Silicon-A<sup>™</sup>-HRC Plate** mounted onto a clean **Elution Plate**. Centrifuge the assembly at exactly 3,500 x g for 3 minutes.

Eluted, ultra-pure DNA is now ready for use in your experiments, or the **Elution Plate** can be covered with **Cover Foil** for storage of the DNA.

2010 GenoGrinder® is a registered trademark of Spex SamplePrep®, LLC

<sup>1</sup> Make sure the matrices are located at the bottom of the wells of the **Silicon-A<sup>™</sup>-HRC** by firmly tapping the plate against a flat surface.

Be careful to avoid pipetting debris that can clog the wells of the **Silicon-A<sup>™</sup> Plate**
